Agricultural and Rural Development Institute (ARRDI), urged the government to put in place a national policy to establish such parks to "address the agrarian supply chain, deepening inter-industry linkages, increase competitiveness, support valorisation, and also stabilise rural land and labor"

He said such facilities are important since they provide a platform for intensive agricultural production, integration of all the actors within the value chain, from pre-production, such as irrigation, clearing, and storage to production, marketing and post-harvest handling, in order to ensure that agro-parks are successful.

Adyemo urged the Federal Government to partner with the Netherlands to get up a Dutch agro-industrial park in the country.

The goal was set by the Minister of Industry, Trade and Investment, Olusegun Adeyemo, during a meeting with members of the Netherlands Foreign Trade and Development Cooperation (Lilianne Ploumen), on the sidelines of the Netherlands-Business and Investment Forum in The Hague, Netherlands.

The minister said his government is ready to set up a technical team to examine and develop the project.

The technical team, which has been in a high-level meeting in The Hague, was designed to bring back indigenous vegetables to the dining tables by popularising their consumption, marketing and consumption, and also to establish subsidies for women economically and socially deprived through proceeds from sale of the vegetables.

He said the idea is to work with farmers to help them plant high yielding vegetables in their farms, get them to extend their production to meet local demand and to link them with large retailers, so that they can self-sustain and farmers can eat.

Adyemo said the government must map the entire agro-chains process in each park so that farmers are trained in critical areas such as post-harvest, propagation, water management, supply, production, transportation and storage, while making sure that farmers' output becomes the agro-industrial park's output to create high-quality branded products of local and international markets.

She said agro-parks should also be integrated into vertically linked need system since the system still affects the food value chain and the nation needs to stabilise the food system.
